TTUHSC Simulation Program Achieves Reaccreditation

The Texas Tech University Health Sciences Center (TTUHSC) Simulation Program is one of 250 accredited simulation centers worldwide. The TTUHSC Simulation Center is only one of 24 programs to achieve accreditation as a multisite institution, a distinction achieved by only 10% of programs globally.

The university's simulation program has been granted reaccreditation in the areas of Teaching/Education and Assessment by the Society for Simulation in Healthcare, the largest health care simulation accrediting body in the world. This recognition underscores the program's effectiveness in preparing health care professionals through innovative teaching methods and rigorous assessment practices.

The TTUHSC Simulation Program recently was recognized for reaccreditation at the International Meeting for Simulation in Healthcare 2024 in San Diego.

“This reaccreditation is a testament to the commitment and excellence exhibited by our Simulation Program in providing outstanding educational experiences and assessments for health care professionals using best practices in simulation-based education,” TTUHSC Simulation Program Executive Director Kyle Johnson, Ph.D., R.N., said. “It reaffirms our dedication to maintaining the highest standards for all learners who train at any of the TTUHSC Simulation Program sites.”

The TTUHSC Simulation Program offers interprofessional, multimodality simulation-based learning experiences that mimic realism in health care environments and is composed of interprofessional sites in Abilene, Amarillo, Dallas, Lubbock, Mansfield, Midland and Odessa. Johnson said this expansive reach allows the university to provide diverse and comprehensive training opportunities for all students.
