

Spring 2023
**GLOBAL HEALTH
LECTURE SERIES**

**Psychological
Impact of Cancer:
A Driver of
Healthspan**

Featuring

Brennan Parmelee Streck, Ph.D., R.N., M.P.H.
Basic Biobehavioral and Psychological Sciences Branch
Behavioral Research Program
Division of Cancer Control & Population Sciences
National Cancer Institute, National Institutes of Health

Wednesday, February 22, 2023

12:00 PM - 1:00 PM

Zoom ([register here](#))

Thanks to the last few decades' advances in detection, treatment, and surveillance, people with cancer are living longer than ever and the population of aged survivors is growing exponentially. However, lifespan is not necessarily equal to healthspan, and survivors' chronological age may not accurately reflect their biological age. In this presentation, Dr. Streck will discuss the topic of accelerated aging in the context of cancer survivorship, the contribution of psycho-emotional impact, and a potential framework for exploring the association between the two.

This event is free and open to the public. No RSVP is required. For more information about the lecture series, please contact the Office of Global Health by [email](#) or visit our [website](#).
